

SCM-Series™

INSTRUCTION SHEET Accent Lighting Strip

SCM-AL™

Thank you for purchasing this full color LED strip from Shadow-Caster Lighting®. This LED strip is meant to be mounted under gunwale areas of the boat and other indirect areas to provide lighting for the interior areas of your boat.

The light strip is completely waterproof and wash-down friendly.

Care and handling:

Do not twist or pull LED strip. It is possible to damage solder connections where the wire is connected to the strip and individual LEDs.

Installation:

The LED strip is terminated with 20 ft. of color coded wire to easily connect it with Shadow-Caster's accent lighting controller (SCM-ALC™). It is recommended that the light be mounted in place with clear RTV silicone. However, enough mounting straps are included with the strip so that one strap can be placed every 12 inches.

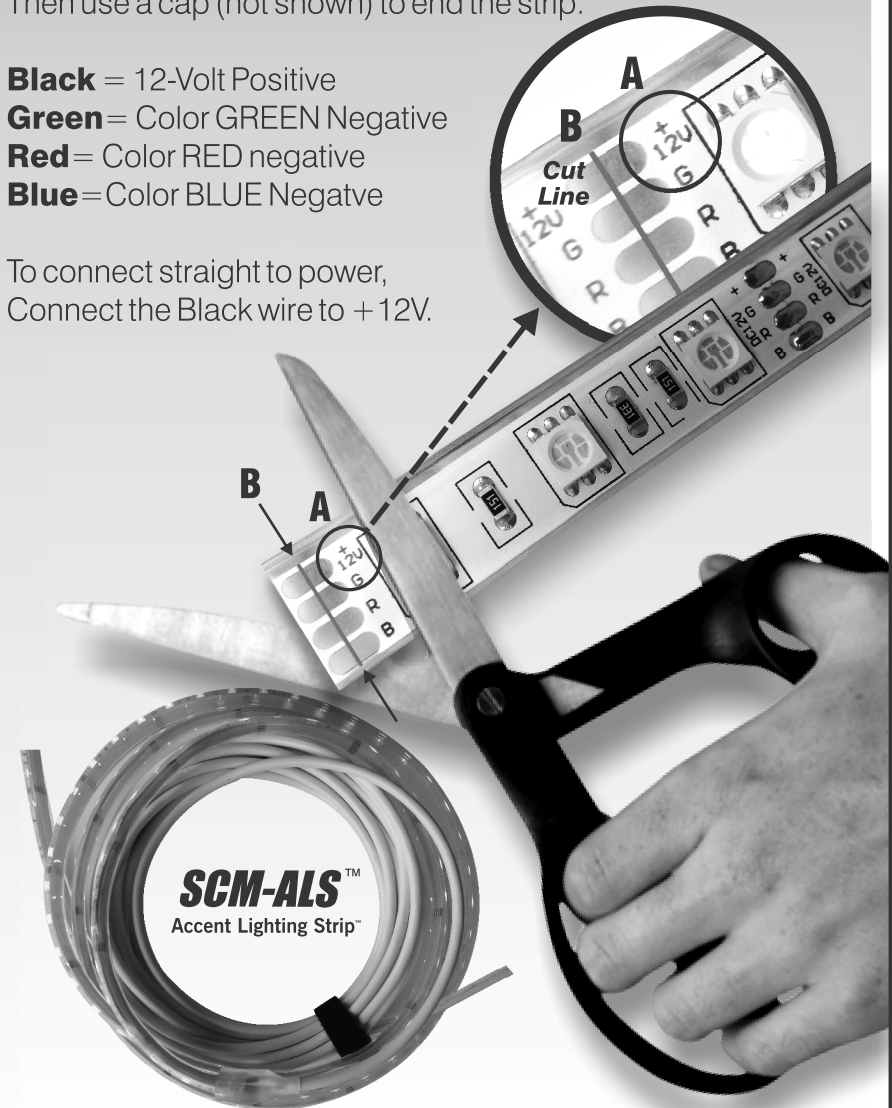

If the LED strip is too long, it can easily be cut using scissors at 3 inch increments, any where there is a cut mark shown (See Picture).

On the strip, locate the 12 volts "12V" Imprint (See 'A'). Use scissors to cut line (See 'B') to the left of "12V". Then use a cap (not shown) to end the strip.

*Cut Area
Zoomed In*

Black = 12-Volt Positive
Green = Color GREEN Negative
Red = Color RED negative
Blue = Color BLUE Negative

To connect straight to power,
Connect the Black wire to +12V.
