

MARINE PIGTAIL ADAPTERS

Power pedestal electrical hookups can vary greatly from one marina to another. Savvy cruising boat owners using the revolutionary SmartPlug shore power system will always be prepared for what they encounter at the dock with a set of Pigtail Adapters. Available in eight configurations, the devices ensure the electricity flows reliably and safely. These Pigtail Adapters have an asymmetrical design with locking, multi-point stainless steel side clips for simple one-handed operation. Designed for extreme weather conditions, SmartPlug Pigtail Adapters have multi-fin silicone gaskets that eliminate water penetration.

REVERSE POLARITY INDICATOR LIGHTS

Reverse Polarity is a safety concern and can damage electrical components on the vessel. This unsafe condition exists when the power coming from the pedestal is improperly wired.

- Blue ON Red OFF: Normal power condition. OK TO PROCEED.
- Blue ON Red ON: L1 and neutral are swapped in a reverse polarity condition. **DISCONNECT CORDSET FROM POWER SOURCE AND IMMEDIATELY CONTACT MANAGEMENT.**
- Blue OFF Red ON: L1 and Ground are swapped in a **DANGEROUS GROUND CONDITION.** Disconnect cordset from power source and immediately contact management.
- Blue OFF Red OFF: No power condition. CHECK CONNECTION AND POWER.
